2.1 Menu item sampler

Sampler

It is useful to create a sampler if a person in the company shall be able to enter sample related data.

The sampler

- receives own login data for the menu residue monitoring.
- can set up sample related data and view analysis results for the locations allocated to him/her.
- has no access to master data.

2.1.1 Overview of created samplers

- Click to display a list of all registered samplers

Refresh with

Sampler

Language Deutsch

Choose approval fruit, vegetables, potatoes

- Please enter sampler's data **completely** and **correctly**
- Tick check-box „**Approval fruit, vegetables, potatoes**“
- Contact data: phone number and email address are mandatory

Enter and save sampler's data with

- Save with
- Log-in data** will be sent to the email address that was entered for the sampler

Note: Samplers can only set up sample related data for locations that have been allocated to them (s. chapter 2.10)

2.2 Menu item sampling requests (only for coordinators)

Under the menu item sampling requests, coordinators receive a list of the growers that have been randomly selected by the database for sampling.

- Click  to display a list of locations at which samples must be taken. The column „sampling term“ shows the date until which the site has to be sampled.

Note: The sampling term has been exceeded at locations which are marked with .

- Click  to open detailed information
- Entry of the sample related data: see chapter 2.3

2.2.1 Download of sample related data

You have the option of downloading a list of the sample related data belonging to the sampling requests (see chapter 2.3) as a csv file.

-     Click „download sample related data“ to download the csv file

2.2.2 Export function

You have the option to download a list of existing sampling requests as a csv file.

-     Click the button „download data“ to export the a csv file

2.3 Menu item sample related data

Here, you can create sample related data for those samples that are taken within the residue monitoring.

Sample related data can be found in four different states:

- Sample related data created
- Sampler commissioned
- Laboratory commissioned
- Analysis completed

2.3.1 Overview of registered sample related data

Sample related data fruit, vegetables, potatoes								
Deadli	Sample ID	status of sample related data	Blocked	Location	Date of sampling	Sampler	Product	Variety

- Click  to open sample and related detailed information
- Click  to export a list of the sample related data (csv file)

Refresh with

Open detailed information with

Button allocation sampler

- By clicking the button  a list of the sample related data including the allocated samplers can be downloaded as a csv file.
- The list contains the phone numbers of the locations at which the samples need to be taken to facilitate contacting the locations.

2.3.2 Set up new sample related data

- Click 

Set up new sample related data with

- Select type of sample:
 - **Regular samples:** complies with the provisions of the control plan. It is possible to commission additional examination methods, but the scope of the examination cannot be reduced. These samples are always products which are ready for harvest and/or sale. The sample can be drawn before, during or after harvesting.
 - **Voluntary sample:** does not count as one of the mandatory samples that a company has to draw in line with the control plan. The extent of the commissioned method can be selected as desired.
 - **Release Sample:** is taken after a complaint. It can be used by the scheme participant to regain his/her eligibility to deliver the noncompliant product into the QS scheme.
 - **Pre-harvesting samples:** does not count as one of the mandatory samples that a company has to draw in line with the control plan. This type of sample is always evaluated by QS as a sample from products which are not ready for harvest and/or sale. It can be used to estimate the residue situation in a product.

Type of sample

Qualitätssicherung. Vom Landwirt bis zur Ladentheke.

■ Sample ID (optional)

The first part of the sample ID corresponds to the location number. The second part of the sample ID can be selected. Alternatively, the database automatically assigns a consecutive number.

Sample ID

■ Select **location**:

- Click
- Click to display an overview of all locations
- Click to select the location

Location

■ Select **sampler**:

- Click and select preferred sampler/ sampling institution or
- Click and select sampling institution

Sampler

Note: As long as the check-box "favorites" is ticked, only the preferred sampling institutions/laboratories will be displayed. To show all sampling institutions, remove the check mark and click .

■ Select **laboratory**:

- Click
- Select laboratory with

Laboratory

Note: As long as the check-box "favorites" is ticked, only the preferred laboratories will be displayed. To show all laboratories, remove the check mark and click .

■ Select **product**:

- Click
- Select product with
- Enter variety if necessary

Product

Variety

■ Select **assigned methods**:

The database determines automatically, which analytic methods – according to the QS control plan - shall be applied for the selected product.

Assigned methods

Note: Only mandatory methods for higher-level products (eg apple) are selected automatically. Please check in the control plan, if there are different mandatory methods for specific products (eg apple Poland) and adjust the methods if necessary.

If you, as the client, would like to have further analysis methods, you can add these under "Assigned methods".

Assigned methods	Assigned method	Select
	Multimethode GC	<input type="checkbox"/>
	Multimethode LC	<input type="checkbox"/>
	Dithiocarbamate	<input type="checkbox"/>
	Benzimidazole	<input type="checkbox"/>
	Anorganisches Gesamtbromid	<input type="checkbox"/>
	Amitraz (inkl. 2,4-Dimethylanilingroupe)	<input type="checkbox"/>

If you remove preallocated methods, you have to mark the sample as "voluntary sample". The sample can then no longer be recognized as a regular sample for QS residue monitoring.

- Select **country of origin:** **Country of origin**

 - Click  and select the country of origin

- Select **place of sampling:** **Place of sampling**

 - Click 
 - Click  to display an overview of all locations
 - Click  to select a location

- Select **place of sampling:** **Place of sampling**

 - Click  and select place of sampling

- Select **Item number, Palett identification number** (optional) **Item number**

- Enter **field/traceability number** **Field/traceability number**

 - e.g. lot number of the product or GPS data of the field

- Enter **sample quantity:** **Sample quantity**

 - Enter quantity in g or kg

- **Date of sampling:** **Date of sampling**

 - Enter the date of sampling as follows: „dd.mm.yyyy“
 - Alternative: click  and select date

- Enter the **time:** **Time**

 - Enter the time of the sampling as follows: „hh:mm“

- Enter **sampling from ... to ...** (optional): **Sampling from ... to ...**

 - Can be used to set the sampler a time frame for sampling
 - Time frame will be set automatically on one year if the fields are not filled in

- Select **country of destination** (optional): **Country of destination**

 - Click  and select the determination country

Qualitätssicherung. Vom Landwirt bis zur Ladentheke.

■ Select **producer** (only for wholesale and preparation/processing; optional):

- Click 
- Enter either the full location number or QS ID or part of a name (in the form %name%) in the search field. The complete postcode or town is mandatory.
- Click 
- Select location with 

Producer

■ Select **first marketer** (only for wholesale and preparation/processing; optional):

- Click 
- Enter either the full location number or QS ID or part of a name (in the form %name%) in the search field. The complete postcode or town is mandatory.
- Click 
- Choose location with 

First marketer

■ Select **discharger** (optional):

- Click 
- Enter either the full location number or QS ID or part of a name (in the form %name%) in the search field. The complete postcode or town is mandatory.
- Click 
- Choose location with 

Discharger

■ Select **type of cultivation** (optional):

- Click  and select the type of cultivation

Type of cultivation

■ Select **organic** (optional):

- If it is an organic product, mark it 

Organic

■ Select **federal state** (optional):

- Click  and select the federal state

Federal state

■ **Particularities and noticeable problems** (optional)

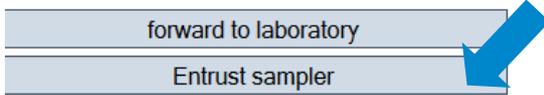

- Free text field, for example for notes for the laboratory

Particularities

Entrust sampler

If the sampling as well as the entry of the sampling data into the QS database is to take place via a sampler, this must be commissioned by you.

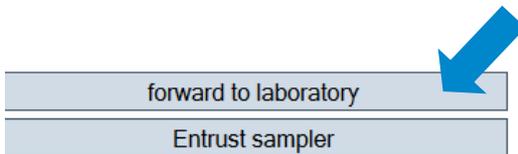

Entrust sampler

- After transferring the sample related data to the sampler, the sampler enters the missing information and forwards the data to the laboratory.
- The sample can be edited as long as it is in the state "sampler commissioned".

Forward the sample related data to laboratory

The data set can be transferred to the laboratory directly or via the intermediate step "sampler commissioned".

Forward to laboratory

- As soon as a data set is in the state "Laboratory commissioned", it can no longer be edited.
- For any corrections click **Reset request** and enter the reasons for the request as free text. QS can reset the data record. You will be informed as soon as the data record can be edited again.

Important: After you have edited/corrected the data set, you must click on "forward to laboratory", again!

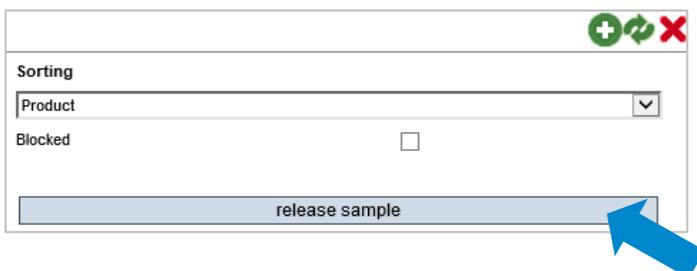

2.3.3 Upload sample related data

You have the option to upload several sample related data simultaneously using a csv file, instead of entering them separately into the database. Here, you can find a template:

[https://www.q-s.de/services/files/anleitungen/rueckstandsmonitoring/csv-template sample related data upload 16%2003%202010.xls](https://www.q-s.de/services/files/anleitungen/rueckstandsmonitoring/csv-template%20sample%20related%20data%20upload%2016%202003%202010.xls)

- Click the button „release sample“

Upload sample related data

- Select the csv file by clicking the button „Durchsuchen“ (=“browse“)

Select csv file

- Click  to upload the file

Upload file

Note: The upload via csv file is usually only worthwhile if several sample related data have to be registered at the same time.

2.4 Menu item analysis results

Analysis results

The analysis results associated with the samples are entered into the QS database by the laboratory. The status of the sample data then changes to "analysis completed". As soon as a sample has been closed, the customer receives insight into the analysis results.

2.4.1 View analysis results

View analysis results

- Click  to display a list of all closed sample related data.

- Click  to open sample and related detailed information

Open analysis results with 

Note:

- Yellow** background samples: Substance(s) was/were detected
- Red** background samples: samples with an excess of the maximum residue level and/or with a substance which was marked as not approved for the culture.

2.4.2 Release samples

Release samples

A release sample is taken after the detection of a non-complying regular sample. Through a release sample the concerned producer can restore his eligibility of delivery in the QS scheme for the non-complying product.

■ Click to open the complained sample

Open data with

■ Click

■ Enter sample related data and commission laboratory/ sampler (see chapter 2.3)

Note: This procedure only allows to commission release samples for non-complying samples that were taken on your behalf. You can commission release samples for non-complying samples taken by a different scheme participant by creating new sample related data and select "release sample" as sample type (s. chapter 2.3).

2.4.3 Export functions

Export functions

The database offers you the possibility to download analysis results and evaluations as Excel files.

Button received analysis reports

■ Click to download an overview of all completed analysis results

Button product/active substance

■ Click to download an overview of which substance was found in which product

Button maximum level exhaustion

■ Click to download an overview of the maximum exhaustion of the substances which were found.

■ You have the option to filter the results by "exhaustion of the legal limit value in percent"

Sample ID	status of samp	Blocked	Location	Date of sampling	Sampler	Product	Variety
GH00001126-111841054	Analysis complete		QS Fachgesellschaft Obst, Gemüse, Kartoffeln -TEST (Näher)	22.10.2014	Heinz Probe	pineapple	

Button multiple residues

- Click **multiple residues** download an overview of the samples with multiple residues.
- You can see how many residues were found and whether maximum residue levels were exceeded.

multiple residues

Button allocation sampler

- Click **Allocation sampler** to download an overview of the analysed samples including the allocated sampler.
- The list contains the phone numbers of the locations at which the samples need to be taken to facilitate contacting the locations.

Allocation sampler

2.5 Menu item external analysis (only for wholesale, preparation/processing)

External analysis

Here you can see external analysis results for which you have received a release.

2.6 Menu item comparison: tonnage sampling (only for wholesale and preparing/processing)

Comparison: tonnage sampling

Here you will find a calculation aid for determining the number of samples that you must have analyzed according to the QS control plan for purchased QS goods.

- Choose the product by clicking
- Tonnage of purchased QS produce (t): Enter the quantity of the QS product concerned (in tons)
- Click **calculate** to calculate the number of samples you need to analyze

calculate

Comparison: tonnage sampling

(*) = Mandatory

Product	-	calculate
quantity of sales per sample	0	
Tonnage		
number of samples	0	

PLEASE NOTE: The tonnage-sampling comparison displays the minimum number of samples, based on the purchased QS produce, that need to be taken by the company each year. The calculation is based on the risk assessment of each product. The country of origin is not taken into account. Please refer to the control plan for possible differences in the risk assessment of certain products with different countries of origin (larger/smaller number of samples). * The details given in the current version of the control plan of the guideline residue monitoring apply

2.7 Menu item preferred recipient

You can set up a list of your preferred recipients here. This is useful in order to prepare a list of your preferred recipients (or customers) to whom you wish to grant access to selected analysis results (see chapter 2.9).

- Choose
- Search recipient using the search functions
- Click
- Choose recipient with

Scheme participant

	Name	QS-ID
	Großhandel Test	4048473726474

2.8 Menu item favoured laboratories/SI

You can select the laboratories and/or sampling institutes (SI) with which you usually cooperate here. SI are companies or organizations that may be commissioned by you with sampling or entering sample related data for one or more locations.

- Select
- Select laboratory/SI with

Select laboratory or sampling institution for sampling

	Name	QS-ID	Type
	TEST Labor QS	4048473374859	laboratory

- The favorite laboratories/SI will appear when creating sample data from the drop-down menu sampler and must not be selected from the list of all laboratories/SI.
